Professional Experience

Software Engineer

CHUBB India

Full-Stack & Cloud Infrastructure

Jun 2024 – Present — Hyderabad, India

- Architected zero-downtime blue-green deployment and rollback strategies with security-driven pod lifecycle management across 20+ Kubernetes microservices spanning North America, LATAM, APAC, and Europe—enforcing 90-day pod rotation and enabling instant rollback without redeploying vulnerable builds.
- Spearheaded disaster recovery and multi-region infrastructure provisioning for the full suite of claims-processing APIs, decommissioning 50+ stale duplicate deployments across 13+ APIs to reduce cluster resource overhead.
- Built an attachment processing service from scratch for the File Note API, implementing asynchronous virus scanning, AES encryption, and automated retry via Azure Functions—eliminating manual intervention for failed uploads.
- Actively leverage **Claude Code** in daily development—Skills, Agents, and structured SDLC methods like "superpowers"—applying systematic debugging and structured brainstorming to accelerate delivery.
- **Awarded the Chubb Excellence Award (Q3 2024)** for outstanding project delivery and end-to-end API ownership.

Software Engineer Intern

CHUBB India

Backend & Cloud Infrastructure – Structured Onboarding

Sep 2023 – May 2024 — Hyderabad, India

- Trained in **.NET Core** and **Angular** fundamentals and onboarded onto the **Claims processing project**, gaining working knowledge of the DCP microservices ecosystem.
- Authored unit tests using **XUnit** for the **DCP Task API** (.NET), strengthening test coverage and service reliability.
- Developed a **WinForms monitoring tool** (.NET / C#) to track Azure Storage Tables and Blobs, improving hardware resource monitoring and data integrity tracking.

Technical Skills

- **Programming Language:** C++, C#, Python
- **Full-Stack Development:** .NET Core, FAST API, Next.js, Angular
- **Agentic AI & LLM Engineering:** RAG, Prompt Engineering, LLM Orchestration, LangChain, Claude Code
- **Cloud & DevOps:** Azure (Functions, Keyvault, App Insights, Logs, Storage), Kubernetes, Docker, Git, Github Actions
- **Databases:** PostgreSQL, MySQL, MongoDB
- **Certifications:** Claude 101 – Anthropic (LLM agent tooling & prompt engineering)

Projects

LoksewaGeeks – Digital Education Platform

Python, Next.js, PostgreSQL, OAuth, System Design

- Architected a digital education platform with modular, distributed services spanning multiple exam domains, built using Python, Next.js, and PostgreSQL.
- Built a high-performance test engine covering 1,000+ mock questions, featuring accuracy analytics and ML-backed personalized recommendations.
- Implemented Google OAuth, strict Role-Based Access Control (RBAC), and high-concurrency discussion architecture to support isolated multi-tenant environments.

Portfolio Chat Agent

Python, GROQ API, Qdrant Vector DB, RAG

- Designed a conversational chat agent for a personal portfolio website, enabling visitors to query background, experience, and projects in natural language.
- Architected the backend with LLM calls via the **GROQ API**, **Qdrant Vector DB** for embedding storage, and a **RAG** pipeline to ground responses in accurate personal context.

Education & Achievements

- **B.Tech Computer Science and Engineering** | Kalinga Institute of Industrial Technology (2020–2024) | CGPA: 9.13/10
- Ranked top 7% globally (#1,532 of 22,000+) in Google Kick Start 2022.
- **Competitive Programming:** LeetCode – 1,000+ problems solved, 1700+ contest rating (Top 10%) | CodeChef – 500+ problems solved, 3* rated | Codeforces – 941 rating, 100+ problems solved.
